Rehabilitation of Koshe/Reppie Dump Site through Implementation of the ‘Fukuoka Method’
(Phase 1, April 2018- March 2019) funded by Japan (Addis Ababa, Ethiopia)

BEFORE PROJECT IMPLEMENTATION
Top: 42 ha, 50m height dump site in Addis Ababa with 2,000 waste pickers
Bottom: one side of the dump site collapsed in March 2017 killing 200 people
Rehabilitation of Koshe/Reppie Dump Site through Implementation of the ‘Fukuoka Method’ (Phase 1, April 2018- March 2019) funded by Japan (Addis Ababa, Ethiopia)

Top: After rehabilitation and stabilization of slopes of the collapsed area (400m) of the dump site
Left: Installments of 52 methane gas ventilation pipes, safe access roads, 162 stabilizing gabion, leachate filtration and drainage (260m)

The project also conducted onsite training to city staff and waste pickers for safer daily operation and maintenance of the dump site
