Missing link in public transport

Malaysia's "messy and disappointing" public transport should take a leaf from Japan's book, writes FAIZAH ISMAIL.

The country's disjointed public transport is often inefficient and overcrowded, causing daily commutes a nightmare for many Malaysians. With the public transport system often chaotic, it is no surprise that many students have to walk to school or battle through crowded buses and trains to get to classes on time.

The disorganization affects not only students, but also workers and the elderly, who struggle to navigate the crowded and often unreliable public transport system. The lack of timely and efficient public transport also hinders the development of the country's economy.

The Malaysian government has recently implemented several initiatives to improve public transport, such as the introduction of the Rapid KL and LRT systems, but these have not been sufficient to address the root causes of the problem.

As an alternative, the government could consider implementing a more comprehensive and integrated public transport system, similar to that of Japan. This could involve the construction of new rail and road networks, as well as the introduction of more efficient and modern vehicles.

In conclusion, Malaysia's public transport system is in desperate need of reform. The government must take urgent action to address the issues and provide a more reliable and efficient system for its citizens.
Monitor and enforce standards

A common goal is buses do not cost as much.

MOTORISTS make an effort at their destinations to public transport twice. Currently, only 14 percent of Malaysia's public transport is in use, and this cost has increased.

Transportation is a major concern in Malaysia. About 14 percent of Malaysia's public transport is in use, and this cost has increased.

The rapid growth of the population and the increase in vehicles has led to a rise in traffic congestion in major cities. The rapid growth of the population and the increase in vehicles has led to a rise in traffic congestion in major cities.

Within the last decade, there has been a construction of roads, and these are now being used by more people. The rapid growth of the population and the increase in vehicles has led to a rise in traffic congestion in major cities.

The Malaysian government is working hard to improve public transport. The rapid growth of the population and the increase in vehicles has led to a rise in traffic congestion in major cities.

In conclusion, the Malaysian government is working hard to improve public transport, and this is leading to a rise in the use of public transport.
